Godrej Security Solutions (GSS) has expanded its health security portfolio with the launch of 'UV Case'. The UV Case helps in sanitising daily objects, equipment and surfaces that people may come in contact with before entering a premise.

As per the company, the newly-launched UV Case uses

UV-C light disinfection technology that helps to create a multiple barrier approach to reduce the transmission of viruses and germs based on current disinfection data and empirical evidence.

The company claims that it has ensured strict quality control and the product has undergone rigorous testing - both at in-house and leading external laboratories which are approved by CSIR. The product is also said to be CE-certified.

The UV Case is a chemical-free case that as per the company can kill 99.9% viruses and germs. The objects it can sanitise include jewellery, mobile phones, masks and PPE Kits.

Since exposure to UV C light can be harmful to humans, Godrej UV Case ensures zero percent leakage and has an auto cutoff feature that instantly shuts the light when the door is opened during the operation, adds the company.
